

Flutter Run Related

Question	Answer
Building with plugins requires symlink support. Please enable Developer Mode in your system settings. Run start ms-settings:developers to open settings. exit code 1	• Launch this in Chrome or Edge. • Open your terminal and run the command: <code>start ms-settings:developers</code>.
The emulator crashed or won't open.	Open Android Studio → More Actions → Select Virtual Device Manager → Locate the device you are running → Click the three dots on the right → Select Cold Boot.

Important Reminders

- **System Crashes:** If your computer freezes, please restart it. Note that unsaved progress may be lost. **Make sure to push your code to GitLab frequently.** You are responsible for your own files; the TA will not be able to recover lost data for you.
- **Resource Management:** Emulators are resource-intensive and prone to crashing. If you create a custom emulator, we recommend adjusting the following settings before running it:
 - Open **Android Studio** → **More Actions** → **Virtual Device Manager**.
 - Find your device → Click the **three dots** → Select **Edit**.
 - Switch to the **Advanced Settings** (or Additional Settings) tab.
 - Set **Graphics Acceleration** to **Hardware**.
 - Set **RAM** to **4GB**.

Note: Adjusting these settings reduces the likelihood of crashes but does not guarantee they won't happen. Please ensure you save your files regularly.

Git-Related

Question	Answer	Reminder
User information has not been configured.	Run the both following commands in your terminal: • <code>git config --global user.name "Your Name"</code> • <code>git config --global user.email "Your Email (The one registered with GitLab or your school email)"</code>	This issue usually occurs during a commit. Once you have finished the configuration, you will need to commit again.
...not a git repository	• If you used <code>git clone</code>: Remember to <code>cd</code> into the repository folder. • If you <code>did not use git clone</code> (e.g., downloaded as a ZIP): Please follow the commands below to push to your personal repository on GitLab: ○ <code>cd <your project folder></code> ○ <code>git init</code> ○ <code>git remote add origin <GitLab_Project_URL: Copy the URL from the "Clone" button if unsure></code> ○ <code>git remote -v</code> ○ # <Note>: Confirm that the displayed URL is your personal repository ○ <code>git add .</code> ○ <code>git commit -m "<your_commit_message>"</code> ○ <code>git push -f origin master</code>	

	• If you using the file TA send to you ○ <code>cd <your project folder></code> ○ <code>git init</code> ○ <code>git remote set-url origin <Personal repo url: Copy the URL from the "Clone" button if unsure></code> ○ <code>git remote -v</code> ○ # <Note>: Confirm that the displayed URL is your personal repository ○ <code>git add .</code> ○ <code>git commit -m "<your_commit_message>"</code> ○ <code>git push -u origin master --force</code>
Question	Answer
The folder is empty after running git clone .	(please make sure you are under the project directory) <code>git checkout mast</code>
Push Rejected: Non-fast-forward error	<code>git pull</code> <code>git push -u origin master</code>

Merge conflict during <code>git pull</code> .	Open the conflicted files (the file names will be listed in the terminal message) and manually select which code segments you want to keep.
---	---

Advice / Reminder

Read the terminal messages patiently; the solution is often right there.
