

How To Start Your Lab

Git Basic Command

- *git clone <project_url>* : clone lab project
- *git add <file_name>* : add modified file(s) to stage
- *git add .* : add all modified files to stage
- *git commit -m"<your_commit_message>"* : commit modification to git repo
- *git push origin master* : push current commit to gitlab / github

How to start your lab

1. Set up your SSH key and add it to GitLab → Preferences → SSH Keys.
2. Clone today's lab repository.
3. Change directory (cd) into the cloned lab folder.
4. Launch the emulator (Press Ctrl + Shift + P and type "Flutter: Launch Emulator").
5. Run: `flutter pub get --offline`
6. Run: `flutter run --no-pub`
7. Example Code Path: `ss2026/flutter/packages/flutter/lib/src/material`
8. Commit your changes frequently (and remember to git push).

Merge options

☒ Delete source branch when merge request is accepted.

☐ Squash commits when merge request is accepted. [?](#)

Contribution

☐ Allow commits from members who can merge to the target branch. [About this feature](#)

Not available for private projects

Don't Select This Option !

Once You Open A Merge Request

Do not delete your source branch !!!

Do not re-open a new merge request with following cases :

- Modified your files after open a merge request
 - You can commit your latest modification and push the master branch. Then your Merge Request should be updated.
- Finished your lab code after midnight (23:59)
 - TA will check commit logs, if you update the project after 23:59, you will get 0 point.

How to check whether the submission success or not :

- Open GitLab → Web IDE → check your latest change.

Setup Git SSH Key

Generate an SSH Key for GitLab

1. Open Powershell or your terminal.
2. Run the following command to generate an SSH key pair:
 - a. `ssh-keygen`
3. After the key is generated, cat the file:
 - a. `cat C:\Users\User/.ssh/id_rsa.pub`
4. Copy the public key inside this file.
5. Go to GitLab → Preferences → SSH Keys.
6. Paste your public key into the key field.
7. Set an Expiration Date (recommend setting it to today).
8. Save the key and start your lab.

```
PS C:\Users\User> ssh-keygen
Generating public/private rsa key pair.
Enter file in which to save the key (C:\Users\User/.ssh/id_rsa):
Created directory 'C:\\Users\\User/.ssh'.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in C:\Users\User/.ssh/id_rsa
Your public key has been saved in C:\Users\User/.ssh/id_rsa.pub
The key fingerprint is:
SHA256:Y/OoFZCSYMVkEAcPfERZSAxL145WWfKkhnlerL9m1c8 user@R326-11
The key's randomart image is:
+---[RSA 3072]-----+
| .X&X=ooo          |
| o.O*++B           |
| ..**+ +           |
|   o=.+            |
|   . o S .         |
|       o *. .       |
|       +.. o        |
|       oo.   E      |
|       .o.          |
+---[SHA256]-----+
PS C:\Users\User> |
```

Copy this path

```
C:\Windows\system32\cmd.exe X Windows PowerShell X + v
PS C:\Users\User> cat C:\Users\User/.ssh/id_rsa.pub
